

MediSolve is pleased to announce the arrival of the latest member of the Grab-Bag family of products: the **Business Continuity Grab-Bag (BCGB)**.

The **BCGB** has been produced to meet the following needs:

1. To make key Business Continuity equipment visible, portable and readily available.
2. To enable Business Continuity and Emergency First Aid equipment to be stored separately so that both requirements can be met simultaneously and independently of each other.

The **BCGB** has been designed to the same high standards as our Emergency First Aid Grab-Bags and its internal modular compartments allow equipment to be stored relevant to purpose.

Benefits

Business Continuity Grab-Bags will provide you with the means of storing equipment on site, at home or at a designated recovery site. Vital equipment can be easily grabbed and taken with you during a Forced Evacuation. Availability of vital equipment is made easier should access to your premises be denied.

Compliments your Emergency First Aid Grab-Bag.
